OOMWOO rear docking IR board (rev 1, 2026-10-28). Two top-looking 38 kHz receivers (the same part as the side board and the dock's U8202) look out of the board face, which faces backward. Put them ~10 mm apart with a baffle between them: both see the dock = it is straight behind, one = steer that way. The outputs have internal pull-ups.
Refs 86xx: unique on the OOMWOO panel.

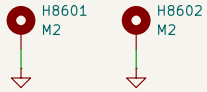

J8601 to the main board REAR-IR1, pin 1 to pin 1:
1 3.3 V, 2 IR_L, 3 IR_R, 4 GND

Mounting: 2x M2 (pads to GND)

U8601 = left, U8602 = right, seen from behind the robot (looking at the board face).

OOMWOO rear docking IR
